

Care Guide – Auto Leather

Why does leather need cleaning and care?

Leather necessarily requires important care products and moisturizers to retain its attractiveness, its wonderful soft grip, and its naturalness for a long time. Leather cannot regenerate itself and relies on effective care from the outside. It can only absorb these if its pores have been cleaned and any dirt particles removed prior to application. Without regular care, leather quickly loses its attractive appearance, it gets dirty, dries out or its colour loses its intensity.

For auto leather we recommend the CORALUX® Auto Leather Care Set from LCK, which includes cleaner, care lotion, a sponge, and a cloth. We recommend using the CORALUX® Cleaner Active Plus and Care Lotion at least twice a year. N.B. Leather can also be sensitive. Therefore, pretest each product for compatibility on a hidden area!

Cleaning

Shake bottle well before use. Apply some CORALUX® Cleaner Active Plus to a soft sponge and cause foam by squeezing it. Never apply directly to the leather. Now clean the leather with light circular movements to remove the dirt. Clean the sponge periodically in lukewarm water. Let the foam soak in briefly on dirtier areas. After cleaning, wipe the leather with a damp cotton cloth. Use distilled water to prevent lime deposits. Always clean the whole area of the leather from seam to seam. Let the leather dry thoroughly.

Care

Shake bottle well before use. Put some CORALUX® Care Lotion on a soft cloth and rub it in. Apply it to the leather thinly and evenly with light circular movements, always from seam to seam. Never apply CORALUX® Care Lotion directly to the leather. Remove any lotion residues with a soft, clean cotton cloth. A slight colour enhancement after application on leather is quite normal and will fade in time.

Important tips on general leather protection

Never use chemical products or ordinary cleaning products on leather. For daily cleaning of leather, it is recommended vacuuming the leather carefully using an upholstery nozzle or wiping the leather carefully with a soft, clean, dry or wrung cloth.

The most important rule for stains: Respond immediately! For beverage stains, absorb the liquid gently with a paper towel. Then clean with CORALUX® Cleaner Active Plus. Avoid pressure and too intensive rubbing.

Colour intensive clothes (e. g. jeans), pillows, blankets, and such like can discolour leather.

Pets, zippers, and sharp objects can damage the leather surface. Please try to avoid contacts with these.
